PUBLISHER / CO-DEVELOPMENT PROPOSAL

Order of the General — Stalingrad 1942

A card-driven hex-and-counter wargame of Stalingrad and Operation Uranus.

Shihe Zhao (MrZhao) · China · remote · szhao9906@gmail.com · November 2026

WHAT IT IS

A company/battalion-scale digital wargame at 216 metres per hex. Eight independent boards cover the Stalingrad city fighting and Operation Uranus: Mamayev Kurgan; the balka and factory belt; city centre and crossings; lower town and the Volga bank; Kletskaya bridgehead; Raspopinskaya pocket; Kalach and the Don bridge; Marinovka and the Chir inner ring.

The player commands through a hand of movement, attack and special cards. The computer resolves line of fire, ZOC, stacking, supply, morale, fieldworks, artillery sheaves and the opponent's legal actions. The AI uses the same decks, rules and combat system as the player; it does not read the hand or hidden orders.

WHY IT MAY FIT AVALON DIGITAL

- **Same audience.** Players who want systems rather than spectacle: SGS, Panzer Corps, Order of Battle, Field of Glory.
- **A rules engine, not a card game on a map.** Hexes, ZOC, supply, morale, fieldworks and combined arms are the game.
- **A real AI.** Five levels; same decks and rules; artillery preparation, suppression and armour handling.
- **Content already authored.** Eight boards, 106 unit templates, 51 card definitions, common ruleset and UI.
- **Historical operations.** Stalingrad city and the Operation Uranus encirclement, with scenario-specific forces and reinforcements.

CURRENT STATE

Feature-complete alpha: card/CP/action-point loop, full combat resolution, AI turns, save/load, hot-seat, LAN, a complete English interface and eight playable boards. The remaining work is production finish, not another prototype.

WHAT WE ARE ASKING FOR

A publishing or co-development partnership to take the current alpha to a commercial beta: a development advance against milestones, publisher-led production with co-development partners, or funding only with our contracted team. We are open to Avalon-recommended outsourcing partners. This is not a request for a full acquisition, and not a request to fund an idea: the rules, AI, content pipeline and playable build already exist.

PRODUCTION PLAN

UI/UX + tutorial	10–15 minute guided slice; onboarding and readability
Historical photographs	Rights audit, commercial clearance or replacement
Audio / music / SFX	Atmosphere, UI feedback, combat, command-room sound
Animation / VFX	Movement, fire, suppression, artillery, card and turn feedback
QA + localization	Windows, saves, LAN, English LQA; extra languages optional
Steam	Steamworks, achievements, cloud saves, depot/build

RIGHTS, LINKS AND NEXT STEP

Game code, rules, UI and scenario design are original work. Historical photographs are sourced from archives and Wikimedia Commons; a rights ledger exists and a commercial clearance audit is in progress. Rights-risky images will be licensed or replaced before release. Source code is not included in the review build.

Screens: Marinovka/Chir; Raspopinskaya; Kletskaya bridgehead (English 1.2.0 build). **Deck:** 12-slide PDF/PPTX attached. **Build:** private link and password supplied separately.

Target: 6–8 months to a commercial beta, subject to scope and partner availability. A detailed milestone budget is available on request.

Current 1.2.0 build: Marinovka/Chir · Raspopinskaya pocket · Kletskaya bridgehead
